

# **Sunrise Hospital and eStudySite Announce Clinical Research Partnership**

We are excited to announce that Sunrise Hospital and Medical Center has partnered with eStudySite to launch a broad-ranging clinical research collaboration. As part of the collaboration we have opened a new, dedicated research medical clinic adjacent to the hospital to serve patients in the studies by providing access to promising new drugs and treatments. This clinic is staffed by a seasoned team of healthcare experts trained in screening and treating interested patients in targeted clinical research trials. Our eStudySite Clinic will be led by our Principal Investigator, Dr. Wade Sears, Emergency Department Medical Director at Sunrise.

This clinical research collaboration will support community access to treatment alternatives and resources necessary to help address a number of acute and chronic medical conditions, including infections, influenza, pneumonia, hepatitis C, diabetes, cardiovascular disease and stroke. In many cases, patients will be provided additional access to medical evaluations, important new drugs and financial support.

*As a leader in providing healthcare services for people throughout the region, Sunrise is proud to be part of this partnership and provide these much-needed services to the community.*
